

Brea

COMMON NAME: Perennial Ryegrass

SPECIES: *Lolium perenne*

Brea perennial ryegrass was developed by OreGro Research. An advanced generation synthetic cultivar, Brea was selected for dark green color, excellent turf density, and enhanced disease resistance. Whether used for home lawns, sports fields, or golf courses, Brea transitions well in the spring, and competes well with weeds.

MEDIUM MATURITY

USAGE TURF	USAGE WINTER OVERSEEDING
Athletic fields, playgrounds	Greens
Fairways, roughs	Tees
Parks, home lawns	Fairways, roughs
Low maintenance	Athletic fields, playgrounds

SEEDING RATES

TURF

Athletic fields, playgrounds: 8-10 lbs. per 1,000 sqft

Fairways, roughs: 8-10 lbs. per 1000 ft²

Parks, home lawns: 8-10 lbs per 1000 ft²

Low maintenance: 3-5 lbs per 1000 ft²

WINTER OVERSEEDING

Greens: 30-40 lbs per acre

Tees: 20-30 lbs per acre

Fairways: 300-600 lbs per acre

Roughs: 250-500 lbs per acre

Athletic fields, playgrounds: 10-15 lbs per 1000 ft²

Brea

Turf

COMMON NAME:
Perennial Ryegrass

SEED COUNT:
240,000 seeds/lb

ESTABLISHMENT

- Brea germinates and establishes quickly on a prepared seedbed. Rake soil smooth, rake in seed, and roll to firm the seedbed. Topdressing with mulch will aid in moisture conservation.
- If overseeding warm-season grasses, scalp off as much material as possible and remove.
- Broadcast the seed, and topdress with sand, mulch, or other suitable products no greater than 1/2" in depth.
- Under ideal conditions, there should be color within a week, and the first mowing will be between two and three weeks.

IRRIGATION

During establishment, keep soil uniformly moist. After the turf is established, water deeply as needed to keep the turf actively growing and healthy. Adapt your water applications to your soil type, structure, and local weather conditions.

FERTILIZATION

- A soil test will accurately measure nutrient level and acidity of your soil. Adjust soil acidity and apply a complete starter fertilizer before planting.
- Apply 3-6 lb of nitrogen per 1,000 sqft annually in split applications. Consult your local garden center, extension agent, or fertilizer company for local needs and special conditions.

MOWING

- Using a sharp mower, adjust your mowing heights accordingly.
 - Home lawns, parks: 3 inches
 - Sports fields: 2-3 inches
- In specific uses, perennial ryegrass may be mowed as short as 1/4 inch for brief periods. Always mow when less than 1/3 of the leaf blade will be removed.
